Flight Data & Notification Platform Architecture

Flifo -> GoTravelX -> OpenClaw -> Communication Channels

FLIFO

- Live Flight Status
- Flight Delays
- Gate Changes
- Boarding Updates
- Arrival / Departure Updates
- Flight Cancellation

Secure API Authentication

GoTravelX Platform (System of Record)

1. Flifo Integration Service

- Authenticate with Flifo
- Fetch live flight information
- Validate incoming data
- Synchronize latest flight information

2. Flight Management Service

- Store latest flight status
- Update operational information
- Maintain flight history
- Update timestamps

3. Booking & Passenger Management

- Flight <-> Passenger Mapping
- Booking Information
- Preferred Notification Channels
- User Communication Preferences

4. Flight Event Detection Engine

- Compare Previous State
- Compare Current State
- Detect Business Event
- e.g. Delayed, Cancelled, Boarding Started,
- Gate Changed, Flight Departed

5. Passenger Resolution Engine

- Identify all passengers on the affected flight
- Retrieve User ID
- Retrieve Flight Number
- Retrieve Preferred Channel
- Retrieve WhatsApp / Telegram / Discord ID

6. OpenClaw Integration Service

- Event Publisher
- Creates standardized event payload:
- { Flight Number, Event Type,
- Delay Information, Affected Users }
- Publishes Secure Event to OpenClaw

Secure Internal REST API / Webhook

OpenClaw Platform

1. Event Listener

- Receives Flight Events from GoTravelX

2. Workflow Engine

- Validate Event
- Identify Workflow
- Load User Context
- Execute Automation

Notification Engine

- Generate Notification

AI Conversation Engine

- User asks a question
- Request Latest Flight Information
- -> GoTravelX Secure API
- <- Current Flight Context
- Generate AI Response

Channel Router

- Select Channel

Communication Channels

WhatsApp | **Telegram** | **Discord**

Passenger / Traveller
